

For guidance on planning your revegetation or restoration site (size, shape, species, density of planting) refer to chapters 4 and 5 of this guide, and head to [www.revegetation.org.au](http://www.revegetation.org.au)

Remember: good quality vegetation sites may not need revegetation at all. Appropriate management can encourage natural regeneration.

# COCOPARRA

LANDFORM	Sandplains and Low Rises		Sandplains and Minor Dunefields		Sandplains, Swales and Dune Crests	
VEGETATION TYPE	Belah – Rosewood Woodland.		Callitris Mixed Woodland (Sandplains and minor dunefields).		Mallee Woodland.	
GEOLOGY & SOILS	Low woodland to low open woodland dominated by Belah and Rosewood, with and open shrubby understorey on sandplains and lunettes. Alluvial or aeolian, red or brown calcareous loams or loamy sands.		Woodlands to tall woodland dominated by White Cypress Pine with emergent eucalypts and Belah on sandplains and minor dunefields. Alluvial, red loams.		Tall shrubland to low woodland dominated by multi-stemmed mallee eucalypts. Aeolian, sandy red loams.	
LOCATION EXAMPLE	No intact examples known, formerly occurred between Goolgowi and Tabbita.		Binya State Forest, lower end of Bingar Track in Cocoparra National Park.		Nericon Travelling Stock Reserve, Pulletp Nature Reserve.
