

# COREINBOB

For guidance on planning your revegetation or restoration site (size, shape, species, density of planting) refer to chapters 4 and 5 of this guide, and head to [www.revegetation.org.au](http://www.revegetation.org.au)

Remember: good quality vegetation sites may not need revegetation at all. Appropriate management can encourage natural regeneration.

LANDFORM	Creekline		Flats and low lying areas		Rising slopes and ridgelines			
VEGETATION TYPE	River Red Gum woodland		Yellow Box and Blakely's Red Gum woodland		White Box woodland		Mugga Ironbark/Scribbly Gum woodland	
GEOLOGY & SOILS	Alluvium. Alluvial soils.		Quartzite, slate, phyllite, greywacke, hornfels and schist. Yellow solonetzic (mottled duplex), and red and yellow podzolic (duplex) soils.		Unconsolidated riverine deposits of clay, silt, sand and gravel. Red and yellow podzolic (duplex) soils		Conglomerate, sandstone, quartzite, reddish shale and siltstone. Red and yellow podzolic (duplex) soils.	
LOCATION EXAMPLE	Coreinbob Creek		Sturt Highway		"Tamboolba" area		"Osterley" (North aspect)
