

For guidance on planning your revegetation or restoration site (size, shape, species, density of planting) refer to chapters 4 and 5 of this guide, and head to www.revegetation.org.au

Remember: good quality vegetation sites may not need revegetation at all. Appropriate management can encourage natural regeneration.

HATFIELD

LANDFORM	Level to Depressed Plains	Undulating Plains, Low Rises and Levees	Sandplains and Low Rises
VEGETATION TYPE	Bladder Saltbush Chenopod Shrubland.	Black / Pearl Bluebush Chenopod Shrubland.	Belah – Rosewood Woodland.
GEOLOGY & SOILS	Low shrubland to low open shrubland dominated by Bladder Saltbush and other chenopods. Alluvial, grey, self-mulching and cracking clays to red duplex soils with grey and brown clays, sometimes saline.	Low shrubland to low open shrubland dominated by Pearl Bluebush and/or Black Bluebush. Aeolian, deep calcareous sands and loams, red-brown duplex sandy soils with clay subsoil.	Low woodland to low open woodland dominated by Belah and Rosewood, with and open shrubby understory on sandplains and lunettes. Alluvial or aeolian, red or brown calcareous loams or loamy sands.
LOCATION EXAMPLE	Oxley exclusion plot, Freshwater Rd, 16km north of Oxley (dieback affected).	Freshwater Rd north of Oxley, Clare – Oxley Rd.	Clare – Oxley Rd, Balranald – Ivanhoe Rd south of Hatfield.
