

For guidance on planning your revegetation or restoration site (size, shape, species, density of planting) refer to chapters 4 and 5 of this guide, and head to www.revegetation.org.au

Remember: good quality vegetation sites may not need revegetation at all. Appropriate management can encourage natural regeneration.

WAKOOL

LANDFORM	Level to Depressed Plains		Prior Streams, Lunettes and Sand Ridges		Level to Depressed Plains	
VEGETATION TYPE	Boree Woodland.		Callitris Mixed Woodland (Prior Streams / Lunettes).		Bladder Saltbush Chenopod Shrubland.	
GEOLOGY & SOILS	Low woodland to low open woodland dominated by Boree with a mainly herbaceous understorey. Alluvial, grey and brown clays, or sometimes on red-brown earths.		Low woodland to woodland of prior streams, source bordering dunes or lunettes dominated by White Cypress Pine and shrubs scattered over a grassy understorey. Aeolian: well drained sandy-loams and loams.		Low shrubland to low open shrubland dominated by Bladder Saltbush and other chenopods. Alluvial, grey, self-mulching and cracking clays to red duplex soils with grey and brown clays, sometimes saline.	
LOCATION EXAMPLE	Moulamein No 8 Channel, Rd to Wanganella, Jackson Weir Rd.		Conargo Rd at Tholobin (prior stream), western end of Wanganella Rd (sand ridge).		Most sites are degraded, Moulamein Rd west of Pretty Pine.
